Self-serve account move for borrowers locked out by an old mobile number

Sreelakshmi Prakash
v1 · Sep 2026

Proposal: not built or user-tested

Problem

A returning borrower on a new number is told the PAN is already registered. The only routes are the old number or support, and CKYC and Aadhaar codes go to the number on file.

6 of 40 KYC reviews (Navi, KreditBee, Money View) describe it. All 6 blocked.

Who (v1)

Returning borrowers with **no active loan** whose PAN is tied to an older account and a number they no longer have, or a second SIM.

Out of scope: active-loan borrowers, PAN or name changes, joint accounts.

Why now

RBI (Jan 2025) asks lenders to clean data against the disconnected-numbers list and update a mobile number "after due verification". Press reports (Dec 2025) say DoT has asked apps to act on accounts tied to flagged numbers, so more accounts may lock.

GOAL

A locked borrower moves the account to their new number inside the app, without anyone being able to take over someone else's account, and finishes KYC in the same session.

REQUIREMENTS

ID	Requirement	Acceptance	Pri.
R1	Detect the lock at PAN entry	Show the masked old number (••12) and two paths. The full number is never shown.	P0
R2	Gate path A ("log in with ••12")	Shown only when the old number is not on DoT's disconnected-numbers list (MNRL).	P0
R3	Nothing goes to the old number	No OTP, SMS or call to it at any step: operators reassign a disconnected number after 90 days.	P0
R4	Live selfie	Matched to the KYC photo on file. Liveness tested to ISO/IEC 30107-3, plus injected-video detection. Failures go to assisted support with the case pre-filled.	P0
R5	Reverse ₹1 UPI check	Borrower pays ₹1 from their own UPI app; payer name must match the PAN name; ₹1 refunded automatically. A ₹1 deposit is not accepted: it only proves the account exists.	P0
R6	After the move	Alert to the email on file and the old device; 24-hour hold on new loans; one-tap "this wasn't me" freezes the account.	P0
R7	Consent	One screen naming both checks and why; separate toggles, nothing pre-ticked; how to withdraw is shown.	P0
R8	Tracking	`pan_lock_detected` → `lock_choice` → `recovery_selfie_done` → `recovery_bank_check_done` → `account_moved` → `kyc_completed`, with a reason code on each failure.	P0

SUCCESS METRICS AND TEST

- **Primary:** KYC completed within 7 days of the lock.
- **Guardrails:** disputed recoveries or fraud flags within 30 days; KYC pass rate; approval rate.
- **Design:** A/B on locked borrowers only, split 50/50 at detection. About **200 per arm** to detect 10% → 20% (both assumed), at 5% significance and 80% power. At a 1% lock rate that is about 40,000 KYC starts.
- **Stop rule:** pause if fraud flags cross a threshold set with risk before launch.
- **Size (base case):** per 100,000 KYC starts, about 30 extra loans and ₹5.6 lakh disbursed. All inputs except the ₹18,802 average ticket are assumptions.

DEPENDENCIES

- Access to the MNRL feed
- Face-match and liveness vendor
- Reverse penny-drop (UPI) provider
- Compliance sign-off that selfie + reverse ₹1 counts as "due verification"

RISKS AND OPEN QUESTIONS

- Takeover with a stolen phone and UPI PIN: limited by the 24-hour hold and alerts
- How many KYC starts hit the lock (only the lender knows)
- Selfie-match accuracy against old KYC photos
- Today's fraud rate on number changes; whether an assisted path already exists

ROLLOUT

v1 runs as the A/B test above. If the primary metric improves and no guardrail breaks, open it to all borrowers with no active loan. Borrowers with an active loan come next, with stronger checks. Aadhaar face authentication is a later option, once the lender has UIDAI authentication approval.

Evidence: 567 Play Store reviews mentioning KYC collected, 102 analysed with AI-assisted tagging, 40 about the KYC step itself (Sep–Oct 2026); walkthrough of all three apps, Oct 2026.
