Dishwasher fit check: an honest answer for first-time buyers before they pay

Sreelakshmi Prakash
v1 · Aug 2026

Proposal: not built or user-tested

Problem

First-time buyers can't tell before buying whether a dishwasher will clean their vessels or suit their kitchen. They find out from the installer, after delivery, on a replacement-only listing.

25 of 67 unhappy Flipkart reviews are about cleaning.

Who (v1)

First-time dishwasher shoppers on a marketplace product page, in homes that cook Indian meals daily, often buying for parents.

Out of scope: repeat buyers, other appliances, AI photo checks.

Why now

Dishwasher ownership in India is very low, so almost every buyer is a first-timer. One secondary source reports sales up about 49% in the first half of 2026 after GST fell to 18% (unverified). All 12 popular listings are replacement-only.

GOAL

Fewer bad outcomes after purchase (wasted installation visits, replacements, 1-star reviews) without losing more conversion than an agreed threshold.

REQUIREMENTS

ID	Requirement	Acceptance	Pri.
R1	Optional entry	Shown on the product page and in the cart to first-time dishwasher shoppers. It never blocks "Buy now".	P0
R2	Your cooking	Household size and the vessels washed daily, multi-select.	P0
R3	Your kitchen	Water source, tap, 16A socket, floor space. Every question allows "Not sure", which becomes a prep item, never a fake yes.	P0
R4	Rules-based result	Good fit / Fit with prep / Think again, with what will and won't clean. Vessel and water rules follow the manufacturer's guide; no AI in v1.	P0
R5	Prep checklist	Salt, rinse aid, inlet adapter, socket, each addable to the cart.	P0
R6	Models that fit	Filters by capacity and size instead of a dead end.	P0
R7	Installer handoff	Answers attached to the installation request, so the first visit isn't wasted.	P1
R8	Tracking	`fitcheck_viewed` → `fitcheck_started` → `fitcheck_step_done` → `fitcheck_completed` → `fitcheck_result` → `prep_item_added` → `order_placed`.	P0

SUCCESS METRICS AND TEST

- **Primary:** 30-day bad-outcome rate per order: site-not-ready cancellation, replacement, expectation complaint, or a 1–2 star review.
- **Guardrails:** product page → order conversion, with a pre-set stop threshold; fit-check abandonment.
- **Design:** A/B on first-time shoppers, 50/50 on the product page. About **2,900 orders per arm** to detect 8% → 6% (assumed), at 5% significance and 85% power.
- **Size (base case):** 200 fewer bad outcomes per 10,000 orders, assuming 8% today and a 25% reduction.

DEPENDENCIES

- Complete listing data (power, size); 6 of 12 listings leave power blank
- Brand rules for vessels and water hardness
- A way to pass answers to brand installers

RISKS AND OPEN QUESTIONS

- An honest "won't go in" lowers conversion; the guardrail caps it
- The real bad-outcome rate and mix, which only the marketplace sees
- How often installers cancel for site reasons, across brands

ROLLOUT

v1 runs as the A/B test above on one category. If bad outcomes fall and conversion stays within the guardrail, open it to all first-time dishwasher shoppers. A video site survey or an AI photo of vessels can come later, if the rules miss too much.

Evidence: 485 Flipkart reviews across 12 popular listings; all 67 rated 1–3 stars tagged with AI assistance.
